PROBLEM STATEMENT

Living through a stressful situation, such as financial insecurity, family upheaval, trauma, loss, or of course, the current COVID-19 pandemic can certainly be a trigger for worsening symptoms of depression and anxiety. For folks already managing their anxiety and/or depression, life stressors can tip the balance from healthy functioning to poor mental health. So one of the way which we can relax can be Music. It's almost impossible to find someone who doesn't feel a strong connection to music. Even if you can't carry a tune or play an instrument, you can probably reel off a list of songs that evoke happy memories and raise your spirits.

PROPOSED SOLUTION

Music has powerful effects on the mind. Different styles of music can have a significant effect on a person's mood very quickly, and it can help them experience and process a wide range of emotions, from happiness to excitement, as well as sadness, calmness, and thoughtfulness.

It can help improve confidence, communication skills, independence, self-awareness and awareness of others, and concentration and attention skills.

So with this in mind i have created a music website where a person can read how music is beneficial for mental health and can also listen to these songs.

UNIQUE SELLING POINTS

1.

It has both information about how music heals and also has a list of songs to choose from.

2.

It has an autoplay switch so that you can turn on the music in your background in the laptop while working on other things

3.

You can increase or decrease the volume of the songs as you seem fit and can even use the mute option.

4.

It is user friendly website and you can easily move to the next and the previous songs if you wish with ease.

5.

You can play and pause the music as you like and can also start the song from wherever you like.

YOUR TECH STACK

1.

HTML

To make the basic layout of the website, the headings, the sections and the paragraphs and divisions.

2.

CSS

To style the website to make it more attractive using colors and positions and fonts .

3.

Java Script

To make the music player functional and to play a number of songs.

THANK YOU
